

Stat 452

Spring 2021

Homework 1, due Mon, Jan 25 by midnight

Please do this assignment in R Markdown following the guidelines I posted. Have it knit to html with `echo=TRUE`. Please submit the Rmd file (not the html file) in Moodle.

These problems are from supplemental Chapter 16: Bootstrap Methods and Permutation Tests. Whenever a bootstrap or permutation test is asked for, use at least 10,000 replications, not the number asked for in the problem. The data sets are available as csv files on Moodle.
